Hi! I'm Varvara. I love figuring out why something doesn't work, digging into data, finding non-obvious bottlenecks, and coming up with ways to remove them. My 5 years background combines analytics, product work, and entrepreneurship. What matters most to me is an energetic team, a non-standard approach to problem-solving, and the feeling that change is actually happening — not just disappearing.

Experience

Program Manager @ Yandex

May 2023 — present

Yandex Practicum is one of the biggest Russian EdTech services for people who want to start the career in IT. I'm responsible for creating an analytical foundation for our forecasting, KPI tracking, and unifying processes with numerous stakeholders.

- **Defined the data architecture and metric tree** for operations, aligning student-level KPIs with EBITDA business goals. Directed analysts/devs in building 4 core dashboards for real-time funnel management.
- **Moved 30-person team from Google Sheets to real-time dashboards.** Automated 250+ manual hours/month, eliminating bottlenecks and enabling department scaling without additional hiring. Onboarded the team on new tools. As a result, knowledge is no longer concentrated solely with me: the team knows where to look for errors and how to work with data in dashboards.
- **Conducted a regression model study** that proved ineffective student segmentation, leading to a major strategic shift in funnel management.
- **Standardized data collection processes** across 90+ online courses: unified metric logic, LX survey framework for program quality, and stable employment reporting

B2C Product Manager @ Smena Station

Nov 2024 — Mar 2026

Smena Station is a travel project for digital nomads, offering opportunities to live, work, and build connections without disrupting work routines. As a B2C Product Manager, I worked directly with the COO and CEO, overseeing our product line and business/marketing strategy.

- **Led the brand repositioning** of Smena Station; designed and executed comprehensive quantitative and qualitative audience research to identify and validate a new

product business model.

- **Directed the launch** of the 24/25 and 25/26 season product lines, expanding the B2C offering into new formats and international locations.
- **Created a new segmentation framework** for both the audience and product lineup, resulting in a 100% "sold out" rate for the upcoming quarter's trip formats.
- Organized a theater performance at the Archstoyanie festival (Russia's largest modern art festival, 10k visitors); generated 400+ warm leads into the sales funnel with zero paid media spend through on-site activations. Secured full funding through a crowdfunding campaign and 5 strategic corporate partnerships.

Founder @ Moving On

2020 — 2024

This is my pet project where I organized trips and events, built a travel community, and managed the project's growth and promotion.

- Ran JTBD interviews to identify decision drivers around trip length and location — resulting in trips selling out within 24 hours. Led 16 trips across different countries, profitable from the 3rd.
- Produced a card game as an upsale and a series of 6 podcasts featuring founders of impactful social initiatives, diversifying the project's revenue streams.

Project Manager

2021 — 2023

Collaborated with Arkady Sandler, an independent expert in the field of AI research.

- Managed the end-to-end publication of a book on Artificial Intelligence: from raw data to a 1,000-copy market release with major publishers.
- Led a three-stage audience study on voice assistants with 1,000+ participants. Result: a 100-page industry handbook for AI developers.

Education

Bachelor in International Finance @ Financial University Under the Government of the Russian Federation

2016 — 2020

Languages

Russian: Native speaker.

English: C1, can talk and communicate easily.

French: A2-B1, can read and talk with the dictionary.

Volunteering

Mentor @ Technovation Girls Kazakhstan

Mentored a team of girls from Kazakhstan through the global tech entrepreneurship program, supporting them in building a tech solution from ideation to pitch.
